

Effective Teaching for Skilled Trades

Workshop Description:

We will continue to explore different ways of working with our Trades and Apprenticeship students, building on our collective experiences with these students. How can we use the real life experiences of the mature students as a teaching tool for the younger students? How can we leverage the skills of technology savvy postsecondary students to teach the second career students who may be less technology advanced? This ability to balance the generation gaps can bring a whole new atmosphere into the classroom

Learning Outcomes:

- Discuss the unique needs of the skilled trades student
- Design a lesson plan format for practical use

Facilitators: Steve Gedies, Fanshawe College
