

# Write On! Effectively and Efficiently Evaluating Written Work

**Linda Jenken & Kim Wilmink**

Perhaps the most difficult task for an educator is to evaluate a student's writing.

## Workshop Description:

Writing assignments connect students to the course material in a way no other activity does. In fact, essays and reports are the best measures of students' skills in higher order thinking and they display students' overall understanding of a topic. However, grading written assignments can be very difficult and time-consuming. Join this interactive session exploring evaluation of various types of written assignments, especially essays and reports. Discover how cooperation between professor and student before, during and after grading saves time and frustration for you.

## Learning Outcomes:

- Discuss strategies for supporting student learning before, during and after a written assignment.
- Apply general guidelines when evaluating written assignments.
- Apply various grading methods when evaluating essays and reports.

**Facilitators:** Linda Jenken, Fanshawe College and Kim Wilmink, Fanshawe College
